Photo: Science meets art at new Ohio State chemistry building

The Columbus Dispatch  
April 22, 2015

Jimmy Cowan takes off his glasses to examine the LED sculpture Hexagonal Grid by artist Leo Villareal.

Visitors to Ohio State's new Chemical and Biomolecular Engineering and Chemistry building can be dazzled by the building's art as much as by its science.

*Hexagonal Grid*, a constantly changing LED sculpture by renowned artist Leo Villareal, has been installed in the building's lobby.

The hexagons are reminiscent of the regular hexagonal patterns found in many important chemical compounds.
